

Wer einen Apple-PC hat und mittels Ruffle-Tool4 (ab Oktober 2022 erhältlich bei uns) kann dies gegen telefonische Bestellung bei uns mit etwas erhöhtem Preis für Firmen bei uns verlangen. Hier zeigen wir das Muster für den internationalen Einsatz für Ruffle-Plug-in wie folgt (erste Serie von App Nr. 27 bis Nr. 100, dann allerdings unter www.agendamanager.ch):

Cal-Tool

Link: Vergrößerung des Ruffle-Facebook-Tools4: [\[hier klicken\]](#)

Der böse Rufener Bauer (Chef dieser Wiese und Gemeinderat meiner Gemeinde, einst riesengrosser SVP-Kantonspolitiker der obersten Lobby) schrieb Brief durch unsere Christine abgeschrieben vom Gemeinderat Langenthal: ich solle zur Wiege der Demokratie zurückgehen und die deutsche Flagge hissen, oder sterben. Der Gemeinderat Langenthal hilft 2021 mit der KAPO BE/SO heftig nach mit wenn es um meine Ausradierung hier geht. Im September 2021 wurde mein wunderschöner Garten von der hiesigen Polizei zerstört, gerade aufgelauert ab der Webseite www.langenthal.eu auf jenen Tag, als die Tochter des heiligen St. Georgs Tante

platform-neutral, hologram-wise in embedded printer font families, and projected vector-style into the Ruffle box.

The large Omicron report

EU travel permit for clockwork manufacturing factory 1 and 2 – CEO Andreas Lützenberger has been granted by the federal authority of the Swiss Confederation for 280 days from today, September 7th, 2022 until August 1st, 2023. Despite the biggest political attack, I can laugh very well when the «Omicrons» blew me away on the Monday before last / there is Corona in tap water too. So it's not difficult to get sick. The consequences were extreme. I can now travel to Germany to future customers with my factory website www.a4web.de (www.a4web.ch has been redirected there in the meantime).

Now have EU passport for Germany!

In addition, my medicine chest is now officially visible. During the omicron phase, the new Cal-Tool4 was repeatedly applauded by the singing travelers on the posh trottoirs in my streets. Indeed. Sweat and fits of coughing kept me away from the research desk. Crack corridor noises from roommates and playing children bear witness to the celebration during my four-day omicron career. Nobody suspects my scientific work, which is so important for further construction in factory 1 from the 24th app up to the 100th app! I sat down again and again and didn't let myself be confused by a gun of a 30-year-old in the middle of my production lines. The woman with children was torn away from me by someone in the IV office - precisely because of such a factory 2 from back then, still with platform construction at that time, but which is now universal. A new scanner program was needed because content management was not previously typed universally per web design manager, but logically platform-dependent character set, one for MAC, one for PC, a third for

a date: The Swiss championship derby from Langenthal against Bern will now take place instead of October 8th, 2022 on October 26, 2022 at 8:00 p.m

Photo on the bottom right where I am standing in front of a watch factory in Switzerland with my car (not in front of my laboratory): the missing element in the preprocessor technology sciences was scientifically discovered during the largest political raid in Andreas Lützenberger's laboratory: the discovery was in new trend from the global Ruffle plugin, a scanner program that re-scans the platforms content management MAC, PC, Linux in such a way that this recovered input data is universally integrated into the plugin and there into the kernel (all 100 apps are universally available from us) universally

German character set-capable clockwork in a universal version in the server-side area (kernel) has been developed by me (Andreas Lützenberger, 54Y).

Why is the new trend in the graphics industry talking about «Ruffle plugin» or «php» when talking about setting up the future components of corporate websites. Is it a question of low costs or is it actually rather the best technique to find the greatest footing in an incipient worldwide cyber war with the smallest of costs!

I have developed 6 kernel products within two factories 1 and 2 (since May 2022), all of which are server-side in the kernel as a continuation of the graphics industry with books that can be browsed in the server-side kernel, agenda that can be browsed in the server-side kernel and finally, according to the editorial title, newspapers that can be flipped through like clockwork with 6 departments and 126 teletext rooms (press articles). And the fifth largest area of content management, which has alternatives everywhere between intranet work and Ruffle plugin kernels. Overall, everything is always server-side kernels within the Preprocessor@.ch technology, or PHP for short.

Hello everyone, finally Bern was able to agree on

Linux apparently.

The Ruffle plugin is a major improvement over its predecessor. The platform is universal for the first time. I have already built 24 universal Ruffle e-apps for sale at www.rufflestore.com since May. Everything works centrally without platforms (new).

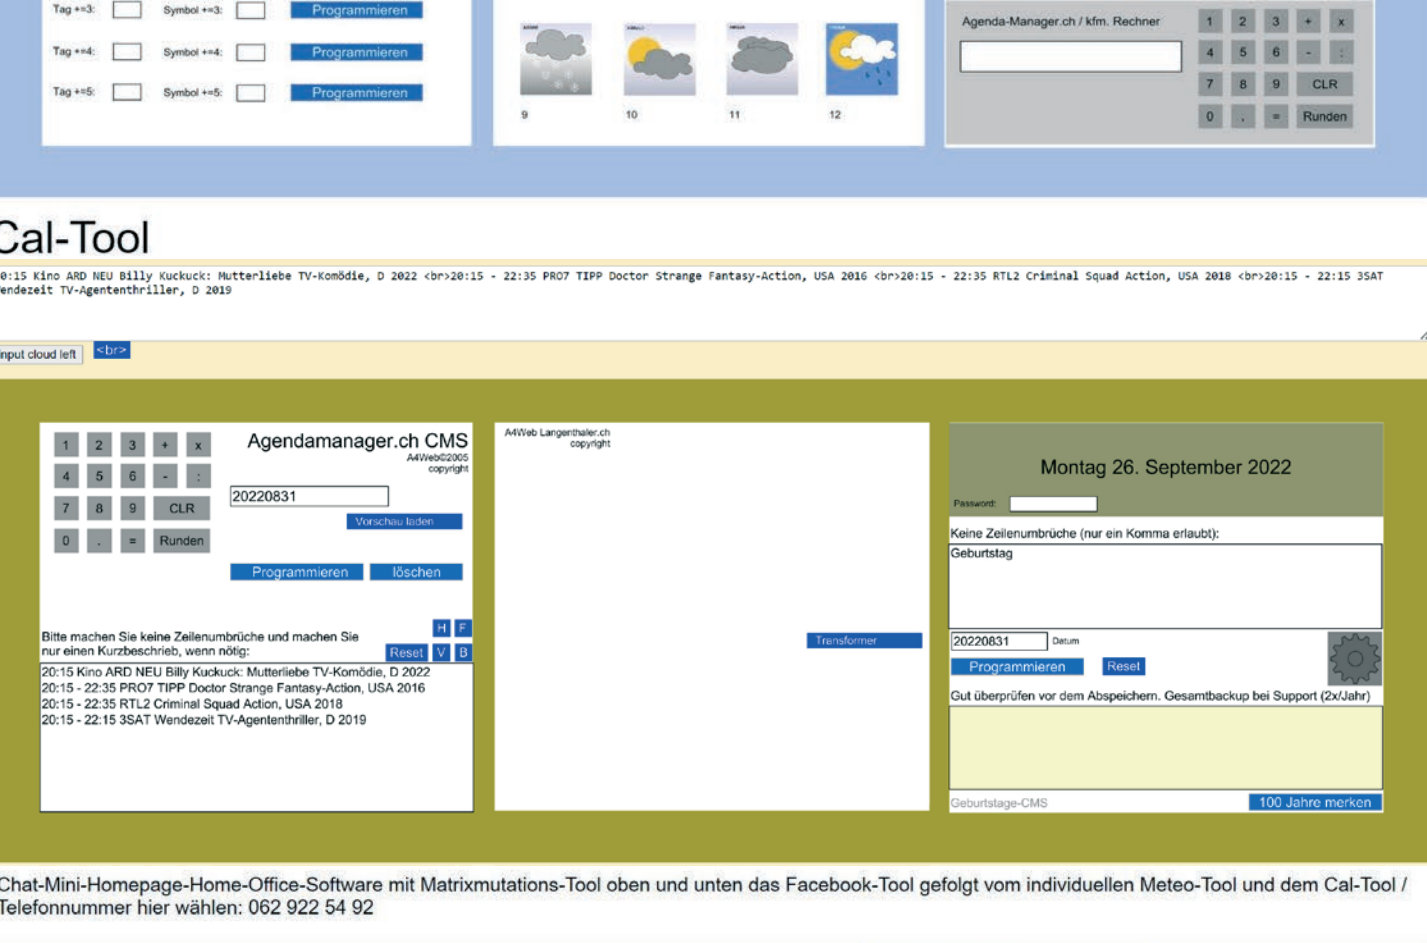

But the Shopwerke divisions are not the only factory. There are also clockworks in our production halls (actually editorial systems, ticking, to be understood like teletext, intended for space crews because of the speed and ease of setup and preparation in advance). The books department is also very large (the most important product there, National Council books, Federal Council Ruffles restorations, glossy books from printing licenses 1-3 for printing in Germany and in Switzerland, standing on the border with two printing high-gloss offset printing machines of the latest time. The latter area is the agenda book called *agendamanager.ch*, which is not a cloud system for the first time. Unique. Lots of apps that are coming right now, thanks to the efforts of me, Andreas Lützenberger, during a four-week weekend severely handicapped by the omicronflu.

Since May, Fabrik2 products have been created in addition to the countless ones from Fabrik 1. Everything on the server side (hologram technology, Preprocessor.ch@ technology by a4web.de). 24 already flawless apps have been running under Fabrik 2 since May worldwide from the USA to Germany and to Basel in Switzerland (Zurich under construction).

On the trail with fever beads: I have now corrected the data chooser universal for Ruffle – App 24 to 100 will follow. Omicron was defeated by me. Balanced knockout situations – self-built data chooser in the intranet department (fifth division) does not have to be used for the home office market that is being striven for worldwide.

I also never fell in the Swiss championships. Finished fourth despite being unjustly killed by KESB Wyssembourg woman for many months. Without further ado, the patents registered in the HR were also certified by the Federal Administrative Court.

In the midst of a questionable political KESB assassination, the Federal Administrative Court had reported positively for my waiting period and issued a certificate for the EU.

Chat-Mini-Homepage-Home-Office-Software mit Matrixmutations-Tool oben und unten das Facebook-Tool gefolgt vom individuellen Meteo-Tool und dem Cal-Tool / Telefonnummer hier wählen: 062 922 54 92

In short: Nobody had been to Switzerland for my watch manufacturing factories 1 and 2, only a few German relatives and father couple. And Biontech with the injection of the graphics branch of the deceased teacher's daughter from Willy Herzig Druckerein in Langenthal, who gave me deep-frozen Booster1 molecules from 28.12. now made my world sale possible. At least now I can see how close I, like other killed IV pensioners, I have been to murder again and again. And what was left, like the moon rocket launch in the USA, was mine in world sales. All waiting until the A rocket is now seen in world trade, which is certainly the case, but the buying behavior is only triggered positively by customer observations over several months. I suspect hundreds of customers from Germany in a few months, then increasing worldwide, or stagnating at a hundred. Who knows what is possible in times of crisis.

The photo above on the outside right shows the Cal-Tool-4 from Fabrik 1, which is already available in the entire European language area and is the last one used to build -6-21s (Facebook websites, for example, to start with one or up to 6 categories) and just ticking 1: 10:6:21 movements can be used. In the www.rufflestore.com from the 25th app, it brings from 26 to 100 more apps for Factory 1, however, to the global

offer in Factory 2 in many months, where the basic scanner program will then be used everywhere (in the most difficult phase of the political Attacks developed in the four days of the omicron) in all 6 kernel php hologram products, which are like books that can be flipped through, from our trained graphic branch with top grades and AKAD/SAWI. Non-dynamic and including an e-shop (!) will take place worldwide in the kernel business, which is a pure commercial b2b business is multiplying among product owners 30 years and their clientele as well. There sings happiness to us in red.
